

Chapter 1

VF Factorization

In Rafael Oliveira's Paper [Oli16] he showed that if $P(\bar{x})$ is a polynomial with individual degrees bounded by r that can be computed by a formula size s and depth d , then any factor $f(\bar{x})$ of $P(\bar{x})$ can be computed by a formula of size $\text{poly}((nr)^s, s)$ and depth $d + 5$.

1.1 Factorization of Low Individual Degree
